EXPERIMENT 9

DRY RUN

Sample Input:

arr = [2, 1, 4]

totalSum = 2+1+4 = 7

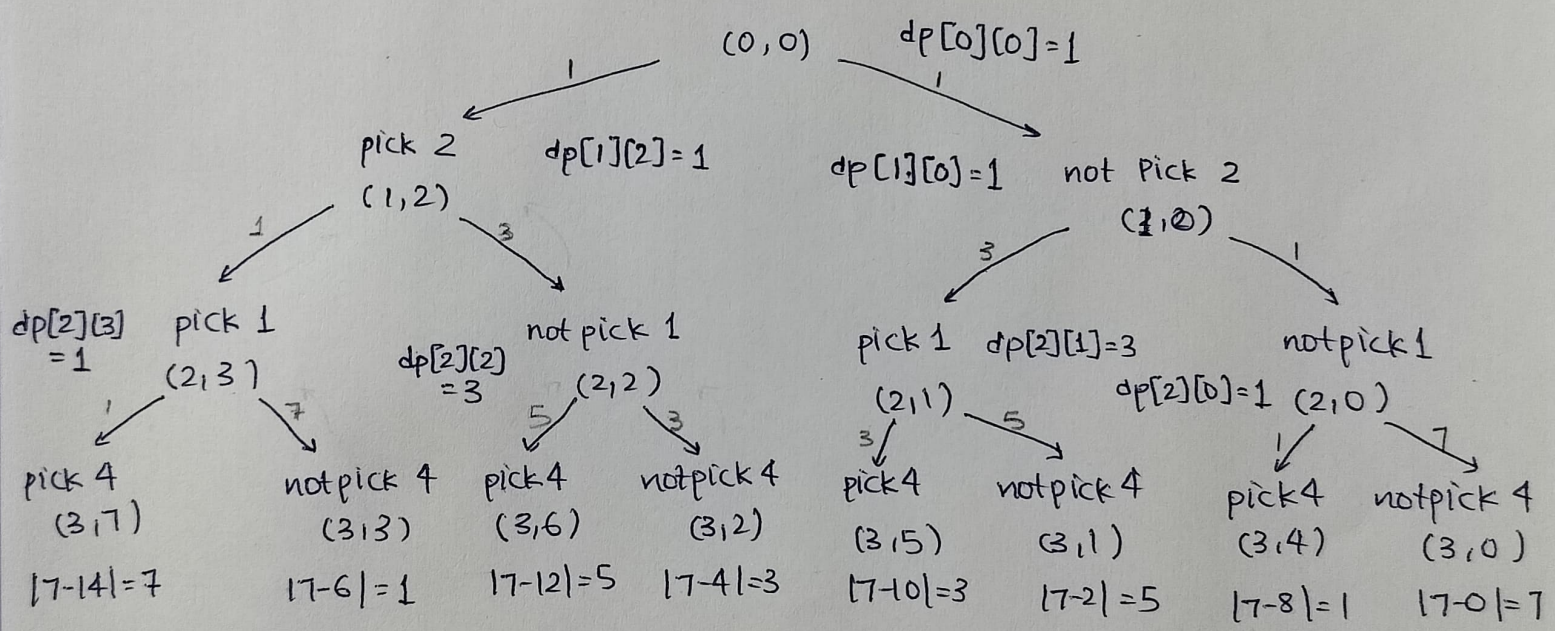
DP table size = (n+1)·(totalSum+1)
= 4×8

dp =

i ↓ \ curr →	0	1	2	3	4	5	6	7
0	+1	-1	-1	-1	-1	-1	-1	-1
1	1	-1	1	-1	-1	-1	-1	-1
2	1	3	3	1	-1	-1	-1	-1
3	-1	-1	-1	-1	-1	-1	-1	-1

dp[i][curr] = min. difference possible from index i onward

solve(i, sum)



dp[0][0] = 1

Minimum difference = 1

Return minimum difference
